AppBar & Bottom Navigation Bar in FlutterFlow

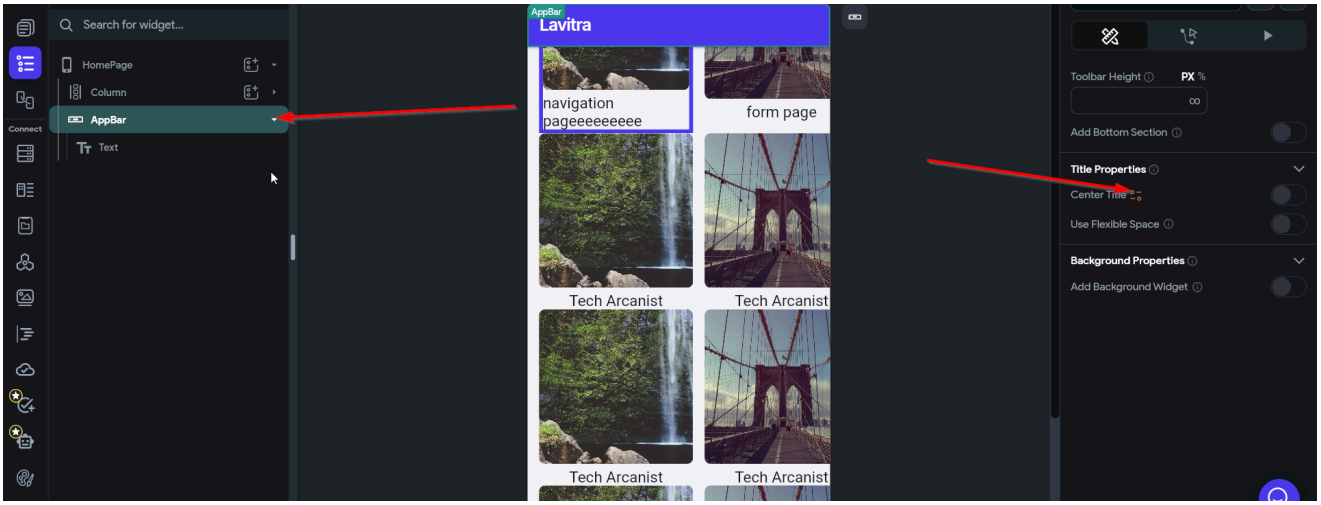

In this section, we will learn how to work with **AppBar** and **Navigation Bar (Navbar)** in FlutterFlow.

Step 1: Explore AppBar Types

From this option, you can explore **different types of AppBars** available in FlutterFlow.

Step 2: AppBar Settings

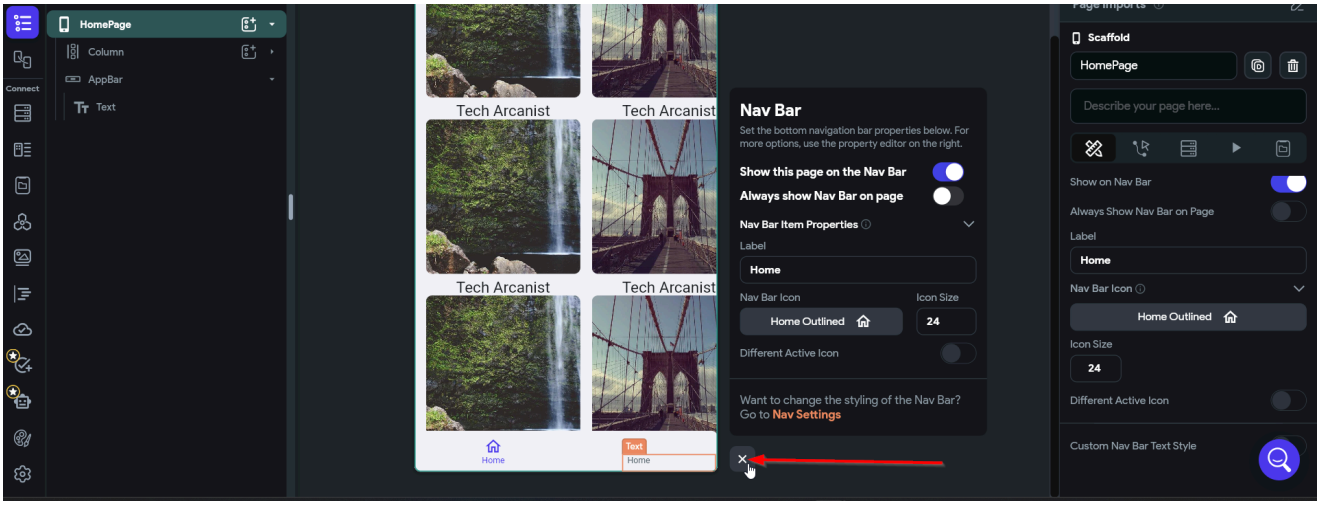

You can configure various **AppBar settings** from here, such as:

- Title

Adding Bottom Navigation Bar

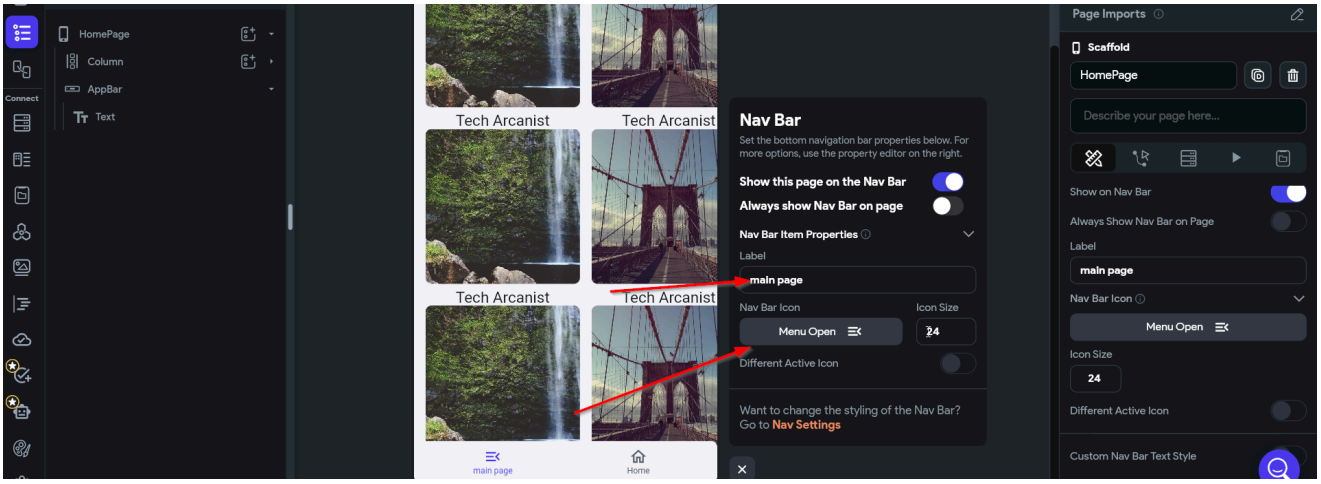

Step 3: Add Navigation Bar

To add a **Navigation Bar**:

- Go to this option
- Add the navbar to **at least two pages**
  This is required to make the navbar active and visible.

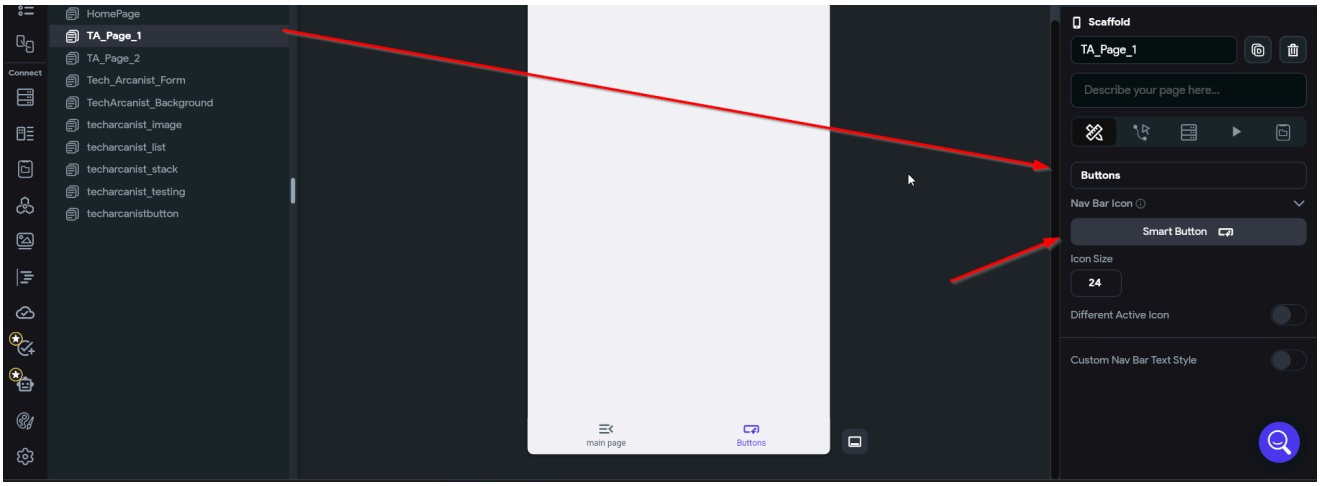

Step 4: Edit Navbar Settings

From here, you can edit:

- Navbar **labels**
- Navbar **icons**

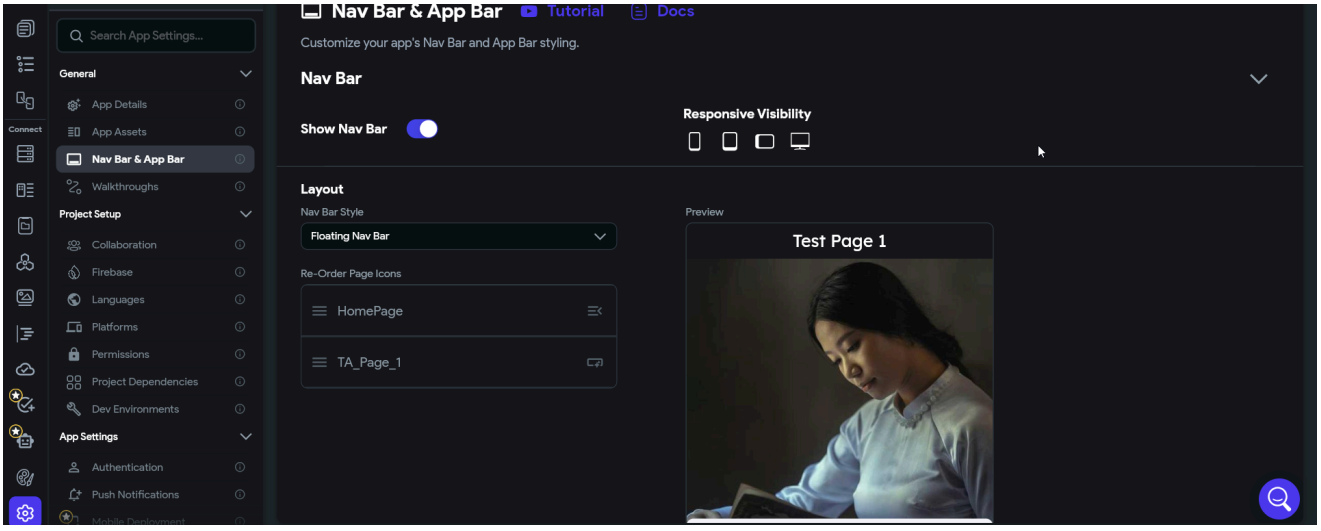

Step 5: Edit Navbar from Page

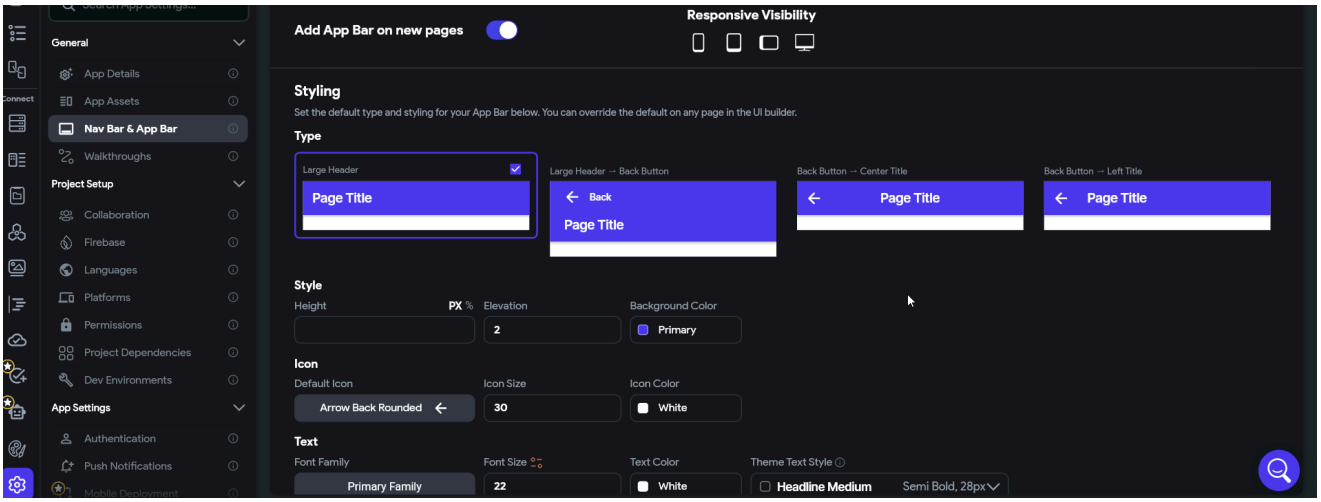

You can also edit **navbar settings directly by clicking on the page** associated with the navbar item.

Advanced AppBar & Navbar Settings

Step 6: Global Settings

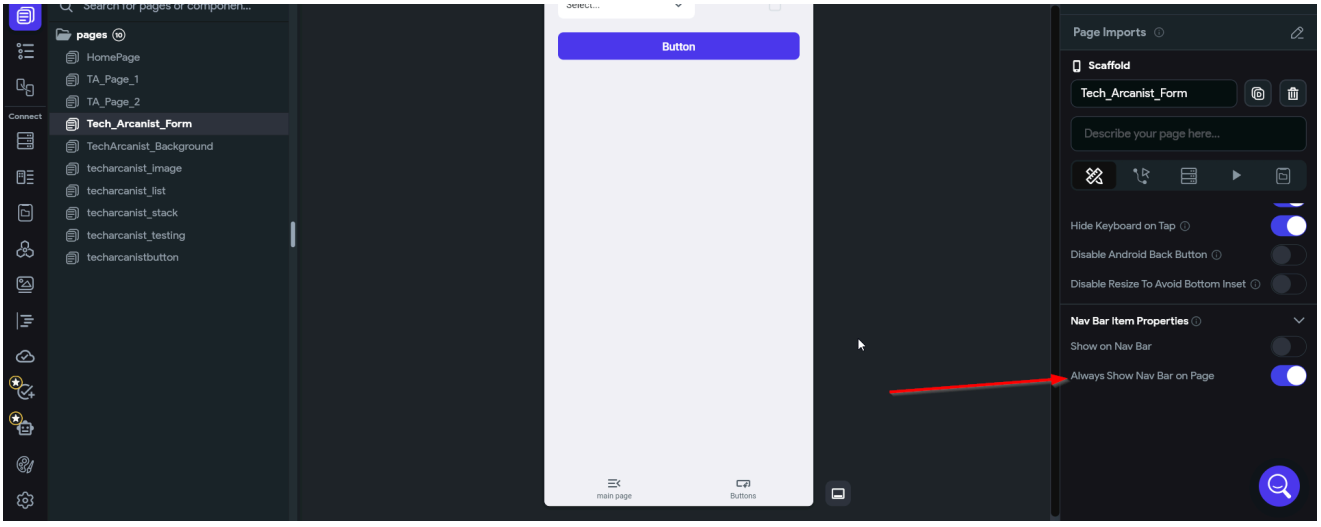

For more detailed settings, go to:
Settings → Nav Bar & App Bar

Here you will find multiple options to customize:

- AppBar behavior
- Navbar behavior
- Styles and visibility

Step 7: Always Show Navbar

If on a particular page you **don't want to add it as a navbar page**,
but still want the **navbar to appear**, enable:

Always show navbar on this page
