Combine Text with Widget State in FlutterFlow

Like earlier, we used **Widget State**.
Now suppose we want to display a **combined text**, for example:

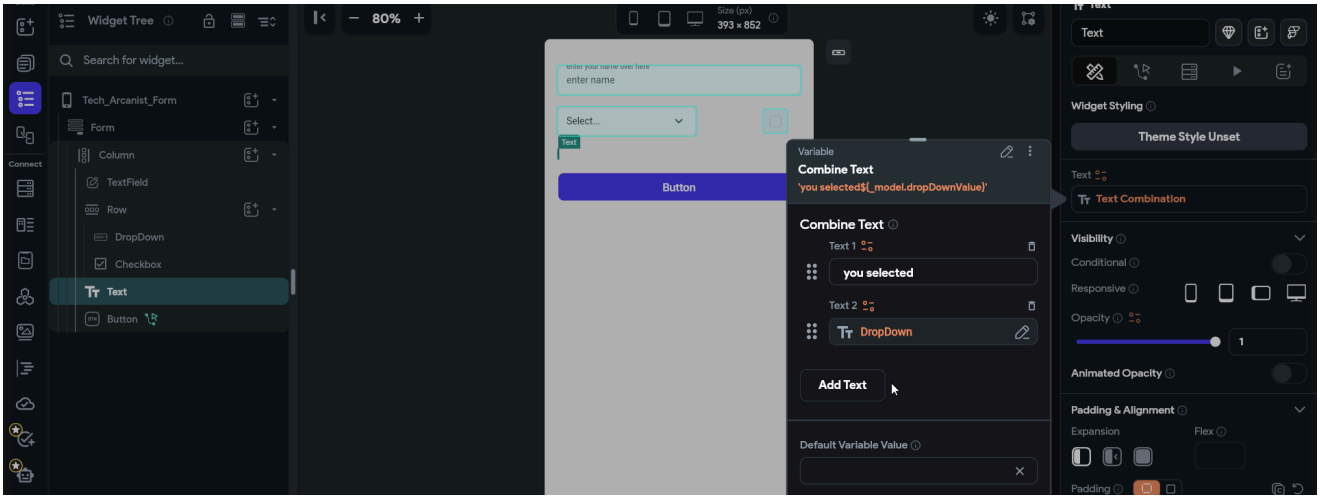

You selected – Option 1

Step 1: Add a Text Widget

Add a **Text widget** below the dropdown (or wherever required).

Step 2: Use Combine Text

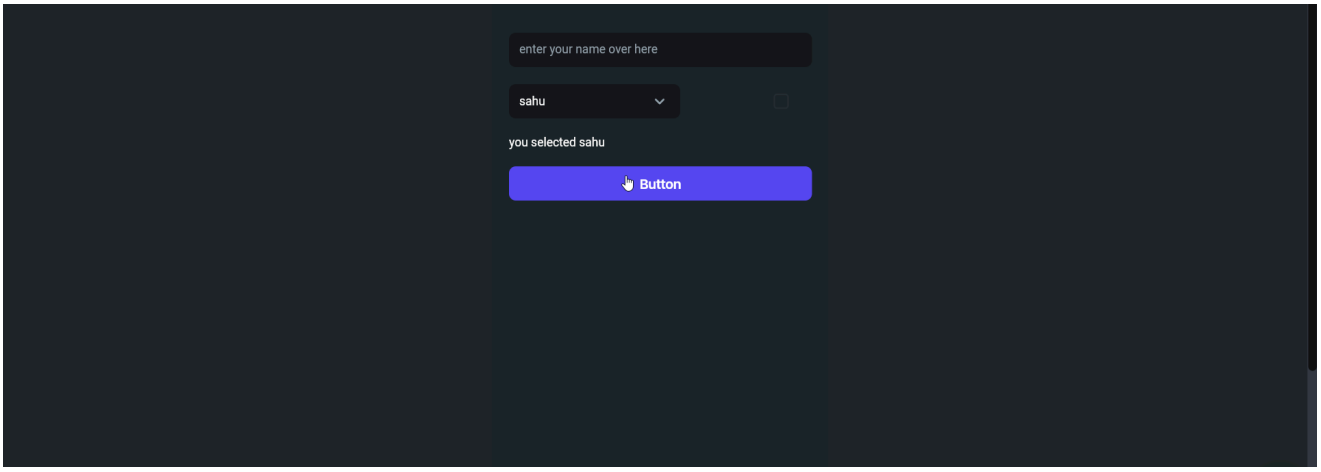

Instead of selecting **Widget State**, search for **Combine Text** and click on it.

Step 3: Configure Combine Text

- In **Text 1**, write:
  You selected -
- In **Text 2**:
  Go to **Settings** → **Widget State** → **select the Dropdown widget**

This will bind the selected dropdown value with the text.

Result

- When no option is selected, the default text is shown
- When an option is selected, the selected value appears automatically
