Custom Dialog in FlutterFlow

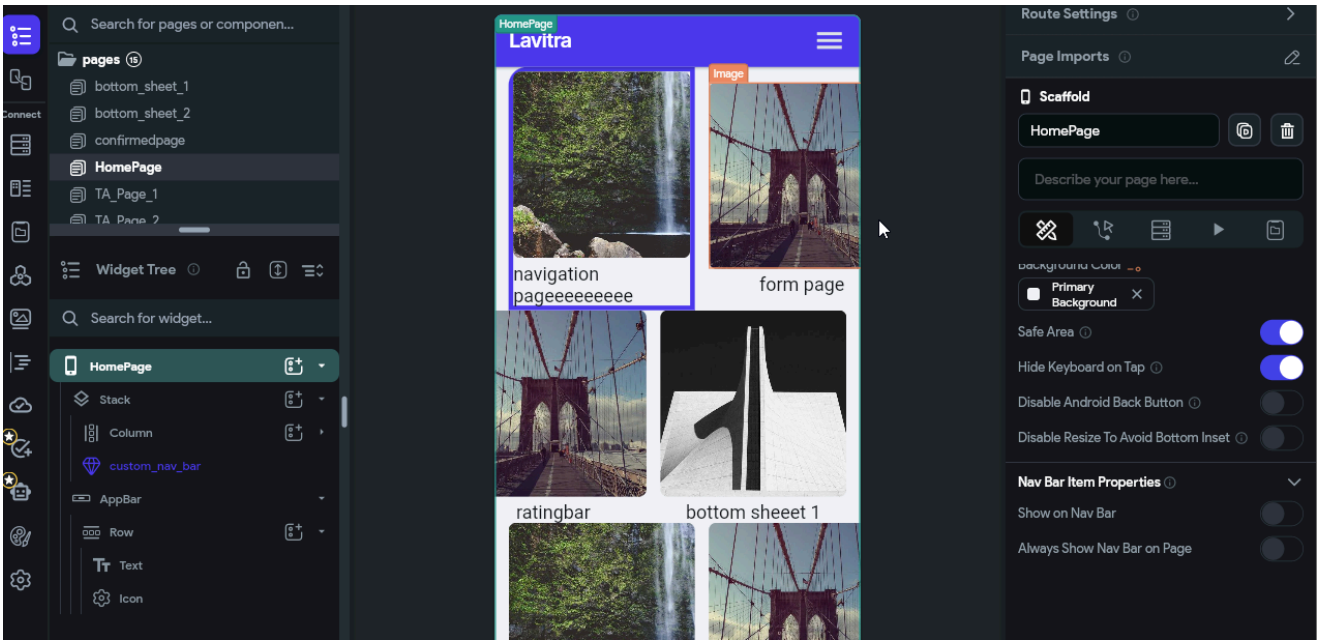

Now we will learn how to create and use a **Custom Dialog**, for example a menu dialog with options like **Logout**.

Step 1: Create Dialog UI

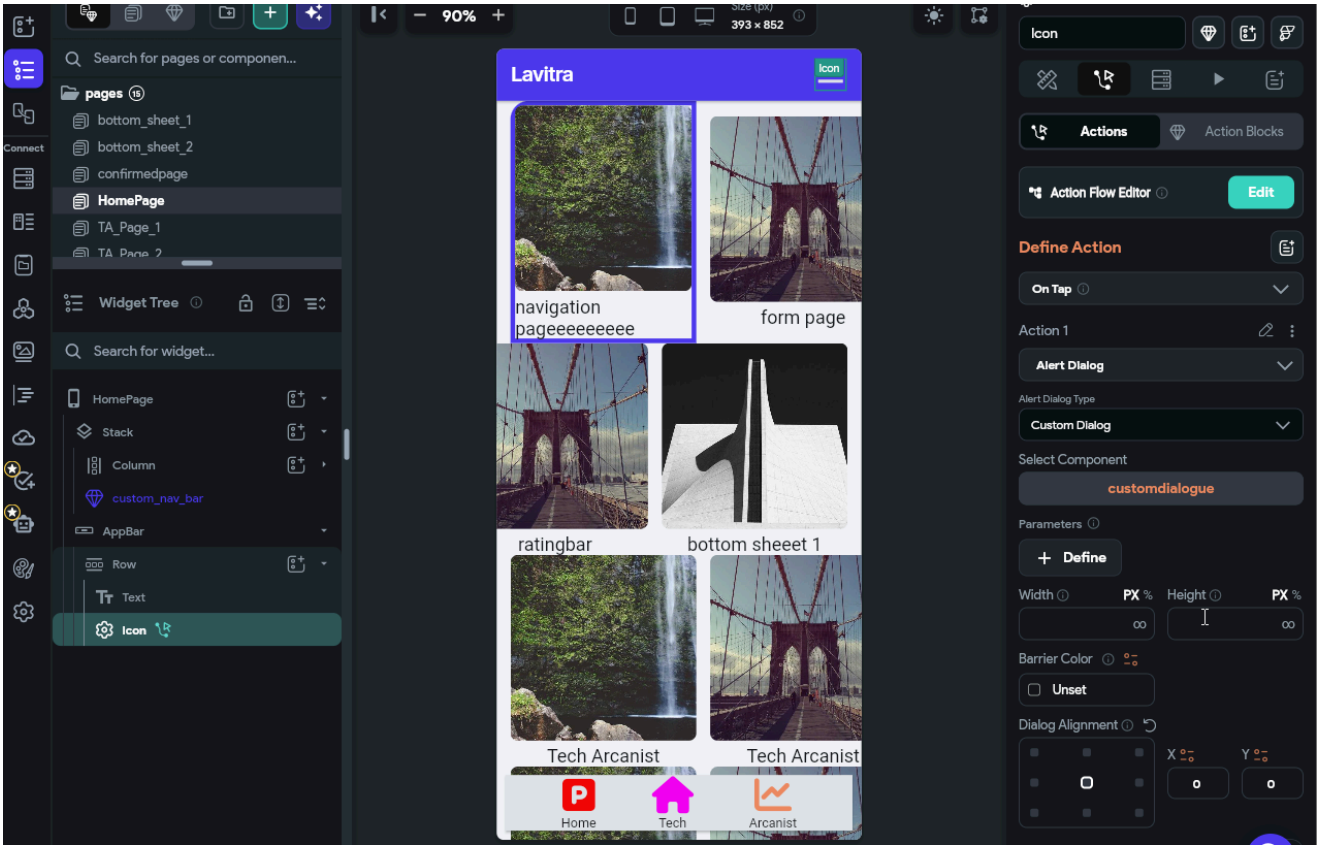

Create a **Container** that will act as the dialog UI.
You can design it like a small card or snackbar-style box.

Step 2: Add Menu Icon in AppBar

Add an **Icon** (menu icon) on the **right side of the AppBar**.

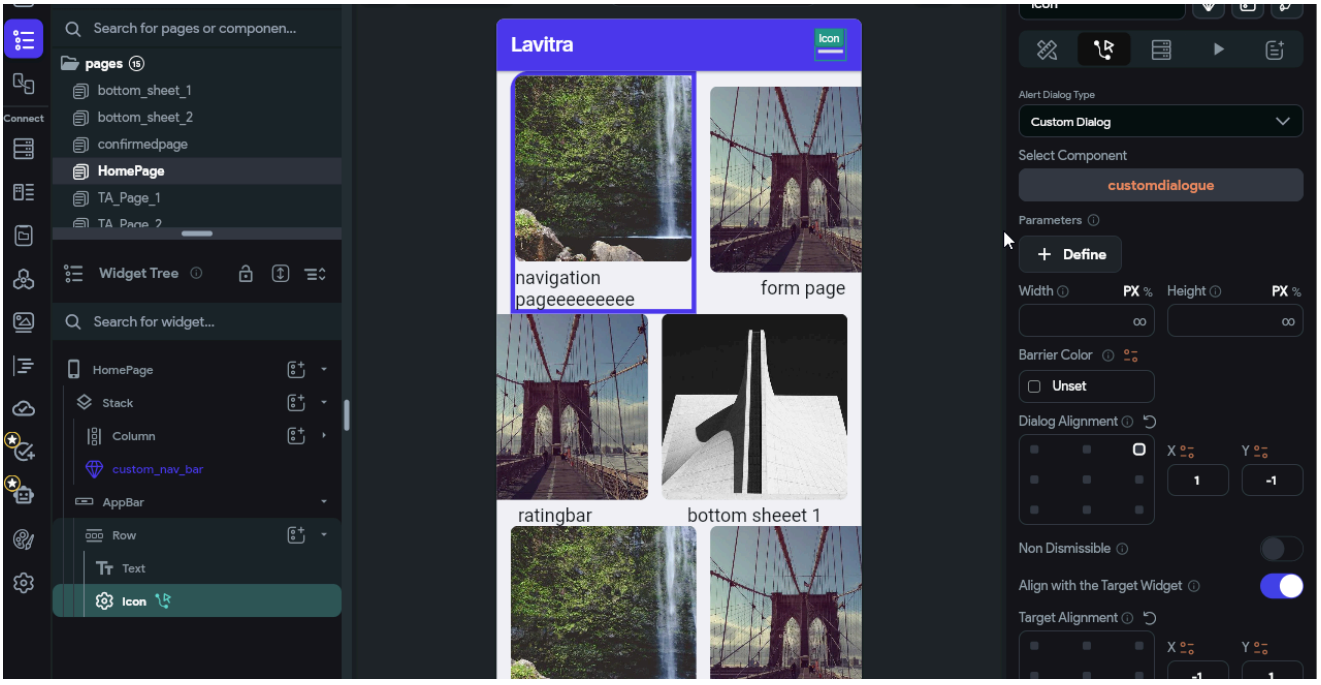

Step 3: Add Custom Dialog Action

Click on the menu icon:

- Go to **Actions**
- Search for **Custom Dialog**
- Choose the dialog **Component** that contains options like **Logout**

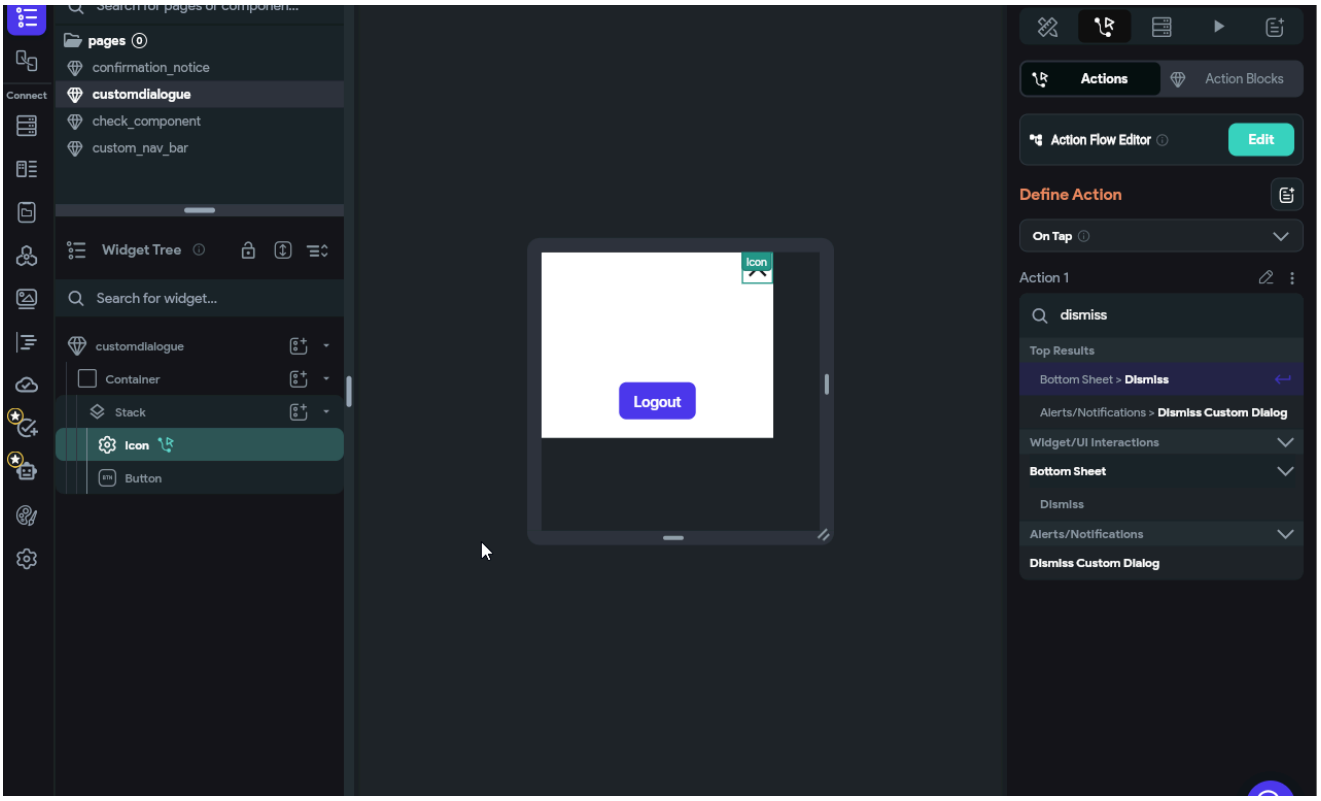

Step 4: Configure Dialog Settings

Set the required dialog settings such as:

- Alignment
- Background blur or overlay
- Barrier dismiss behavior (as needed)

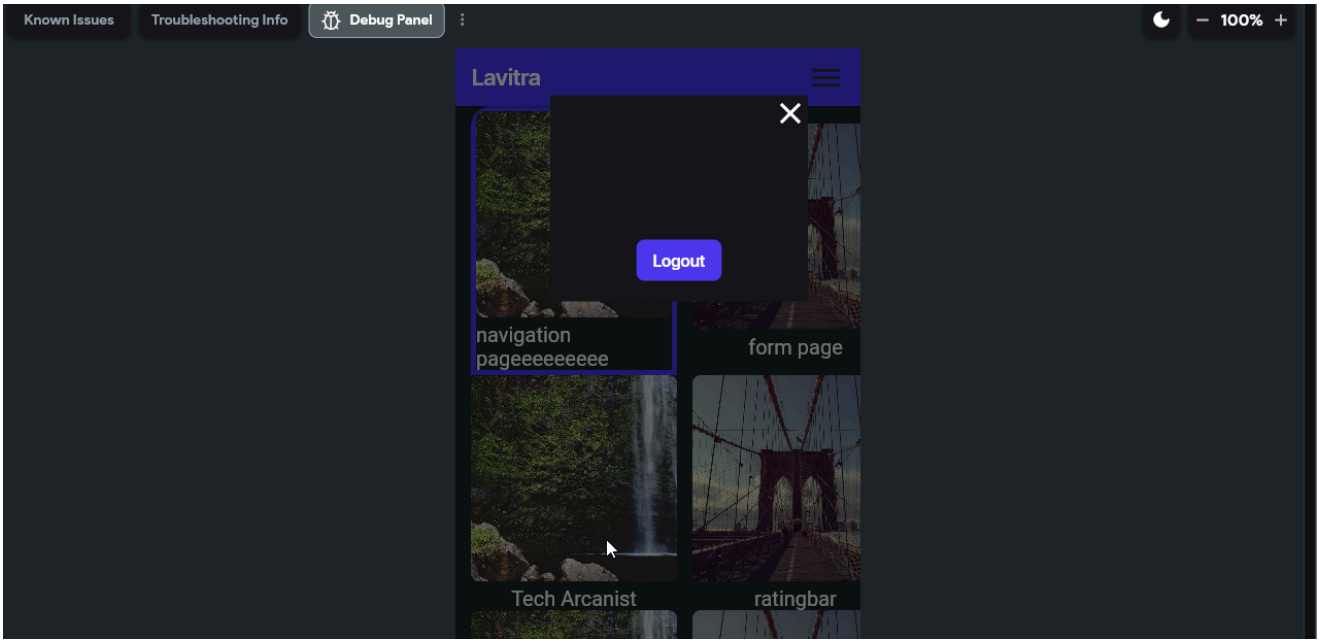

Step 5: Close Dialog Action

Click on the **cross icon** inside the dialog:

- Go to **Actions**
- Set action as **Dismiss Custom Dialog**

Result

When you click on the menu icon:

- A **snackbar-style custom dialog** appears
- You can place options like **Logout**, **Settings**, etc.
- Clicking the cross icon closes the dialog
