# Exploring Text Options in FlutterFlow

In this section, we will explore **Text widget options**, focusing mainly on **Font Family** and **Theme Fonts**.

---

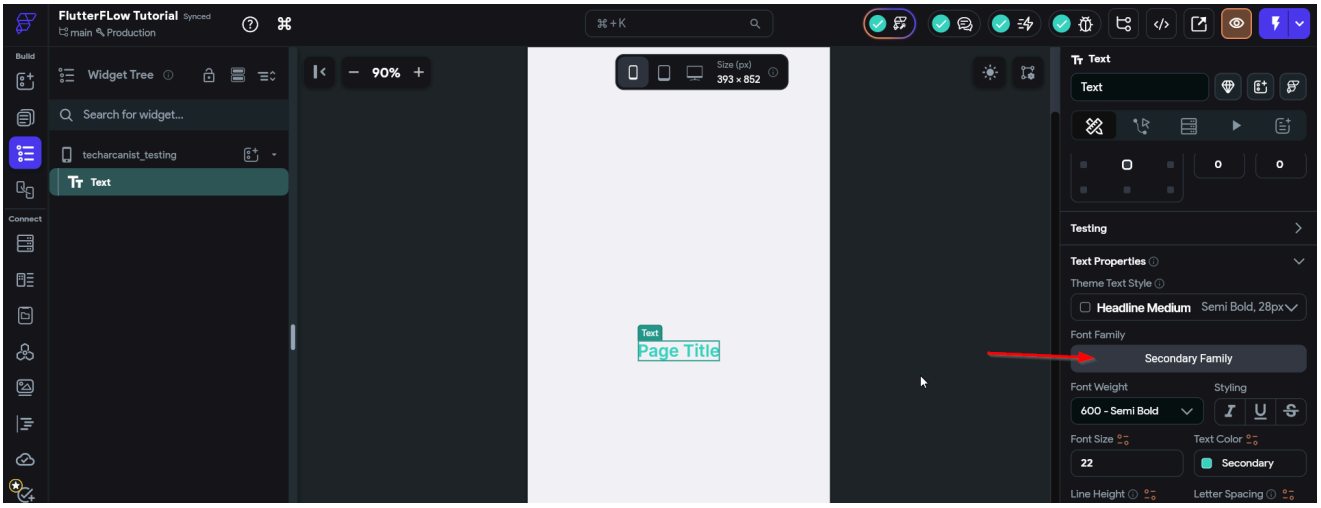

## Step 1: Text Options Overview

Most text options like **padding, spacing, alignment**, etc., have already been explored. Now, let's focus on **Font Family**.

---

## Step 2: Open Font Family

Go to the **Font Family** option in the Text widget settings.

---

## Step 3: Using Theme Fonts

Under **Theme Fonts**, you will see **Primary** and **Secondary** fonts already selected.

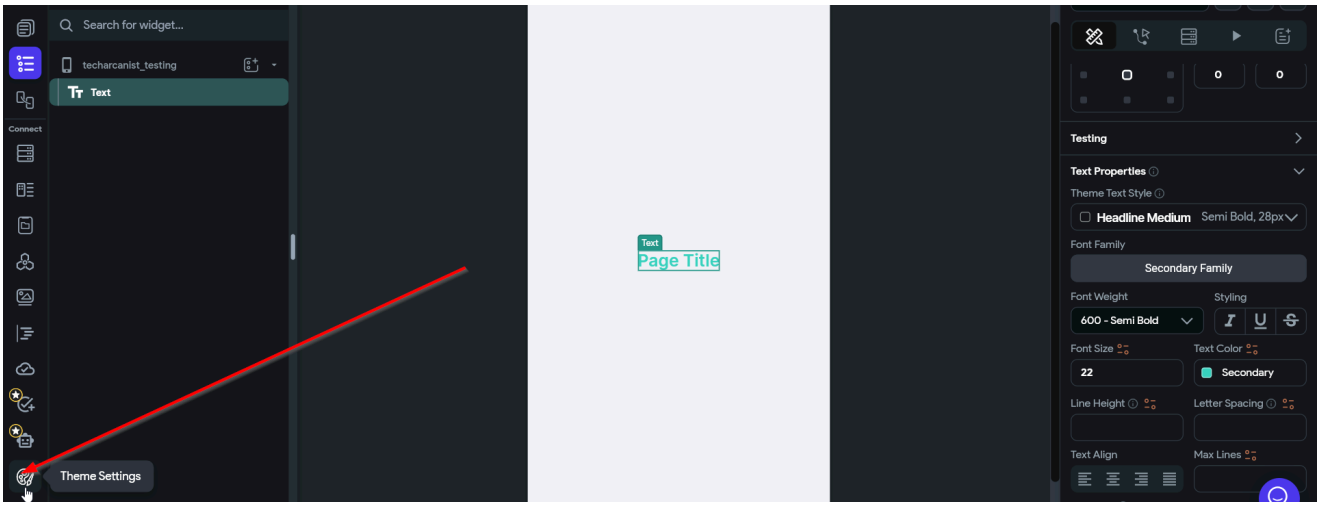

Using theme fonts helps ensure:

- Consistent font usage across the app
- No mismatch where different pages use different fonts
- Easy font management from one place

Instead of selecting random fonts everywhere, choose **Primary** or **Secondary** fonts.

---

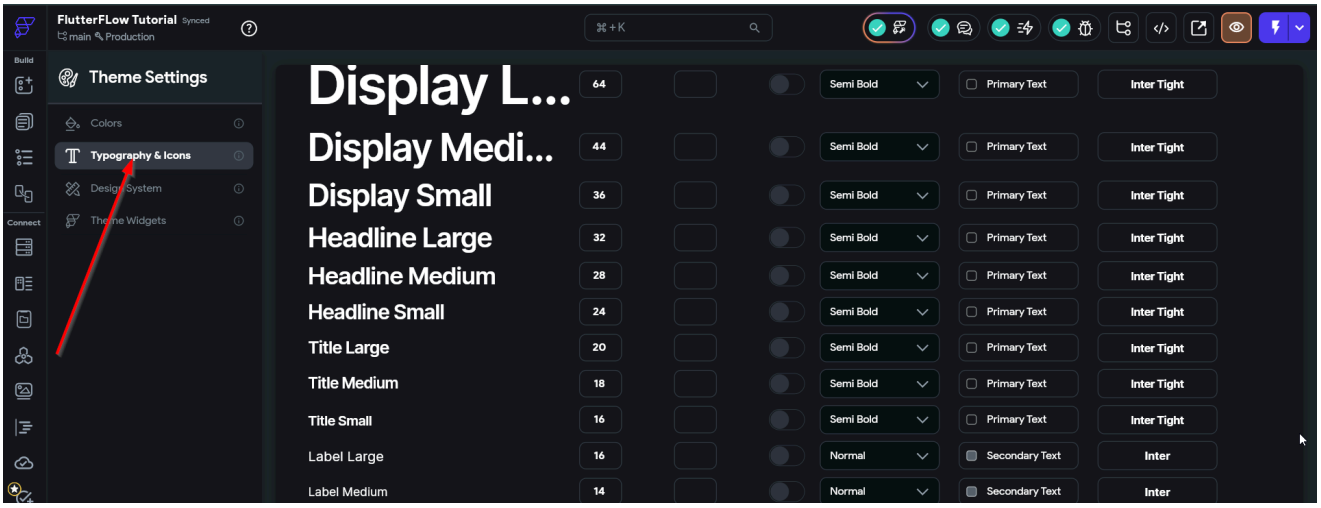

## Step 4: Open Theme Fonts Settings

Go to **Theme Fonts**.

---

## Step 5: Typography & Icon Settings

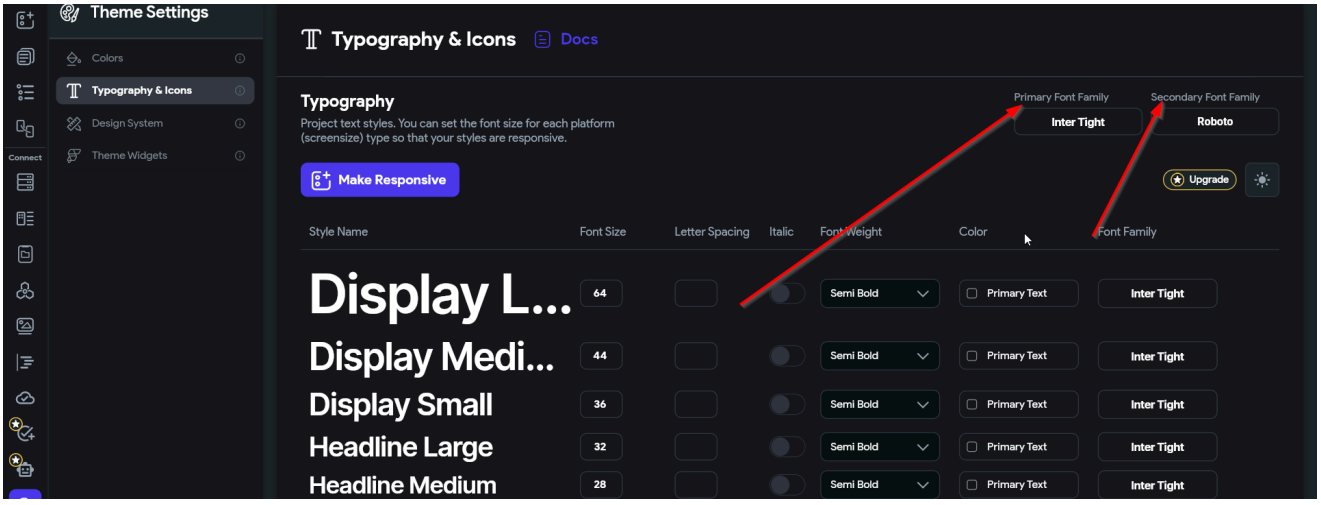

Inside **Typography and Icons**, you can configure:

- Style name
- Font size
- Letter spacing
- Italic (on/off)
- Font weight
- Font color
- Font family

These settings control how text appears throughout the app.

---

## Step 6: Primary & Secondary Fonts

Here you can see and manage the **Primary** and **Secondary** fonts used in your app theme.

Changing fonts here will update text styles **globally**, making it easier to maintain a consistent design.
