Login, Sign Up Navigation, and Logout using Supabase Authentication in FlutterFlow

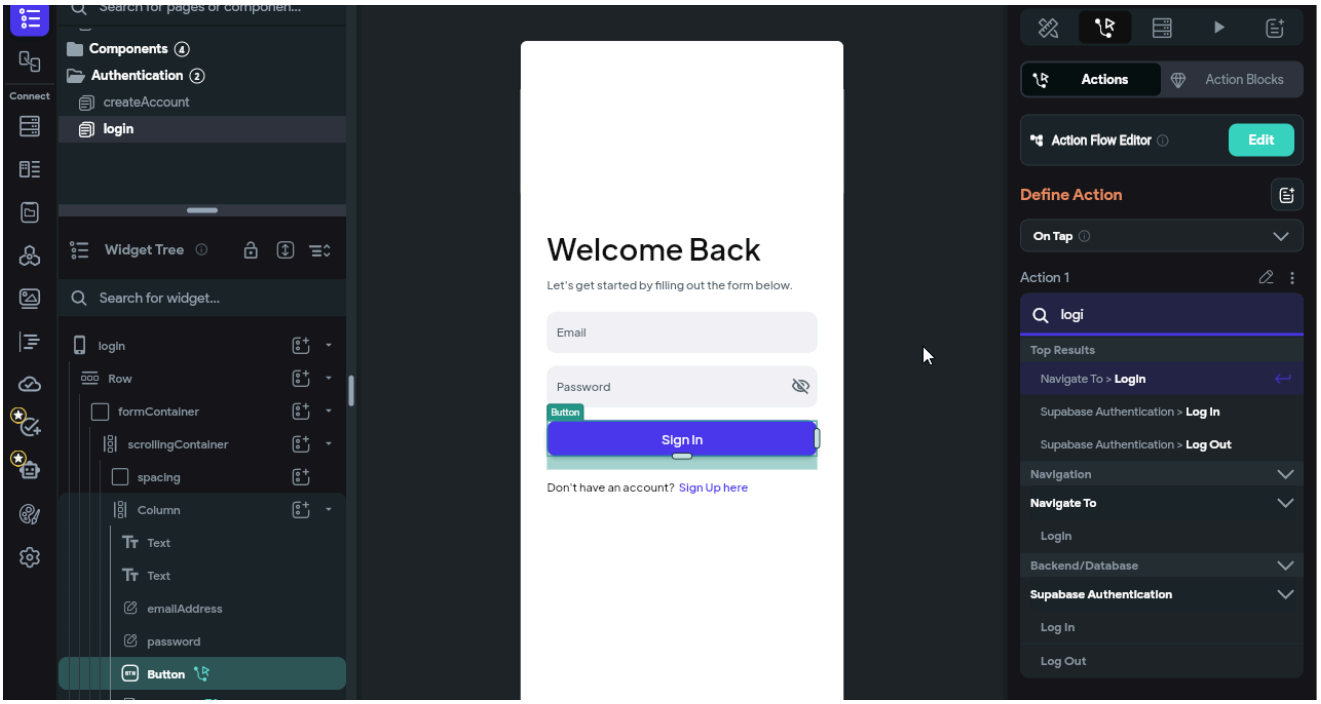

Now we will complete the **login and logout flow** using Supabase authentication in FlutterFlow.

Step 1: Configure Login Action

Open the **Login page** in FlutterFlow.
Click on the **Sign In button** → go to **Actions** → **Add Action**.

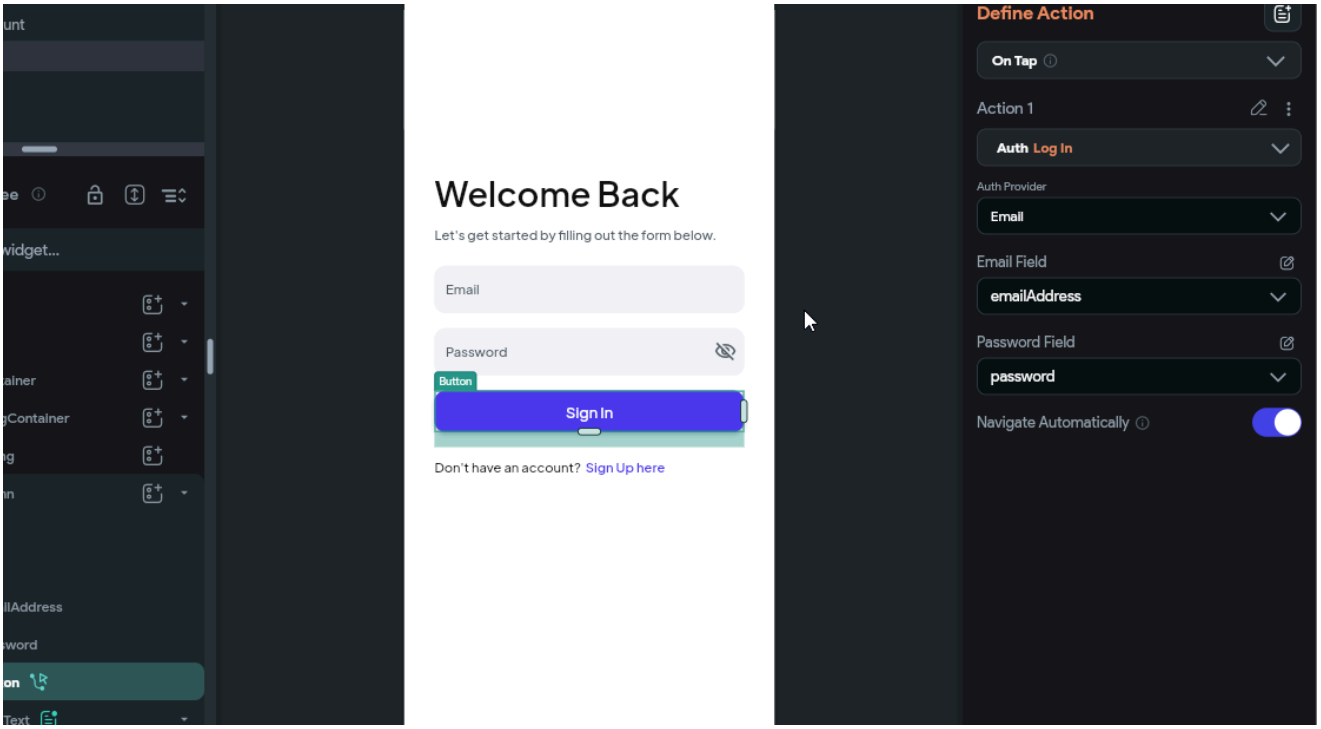

Step 2: Add Supabase Login Action

Choose:

- **Supabase Authentication**
- **Login**

Step 3: Configure Login Settings

Set:

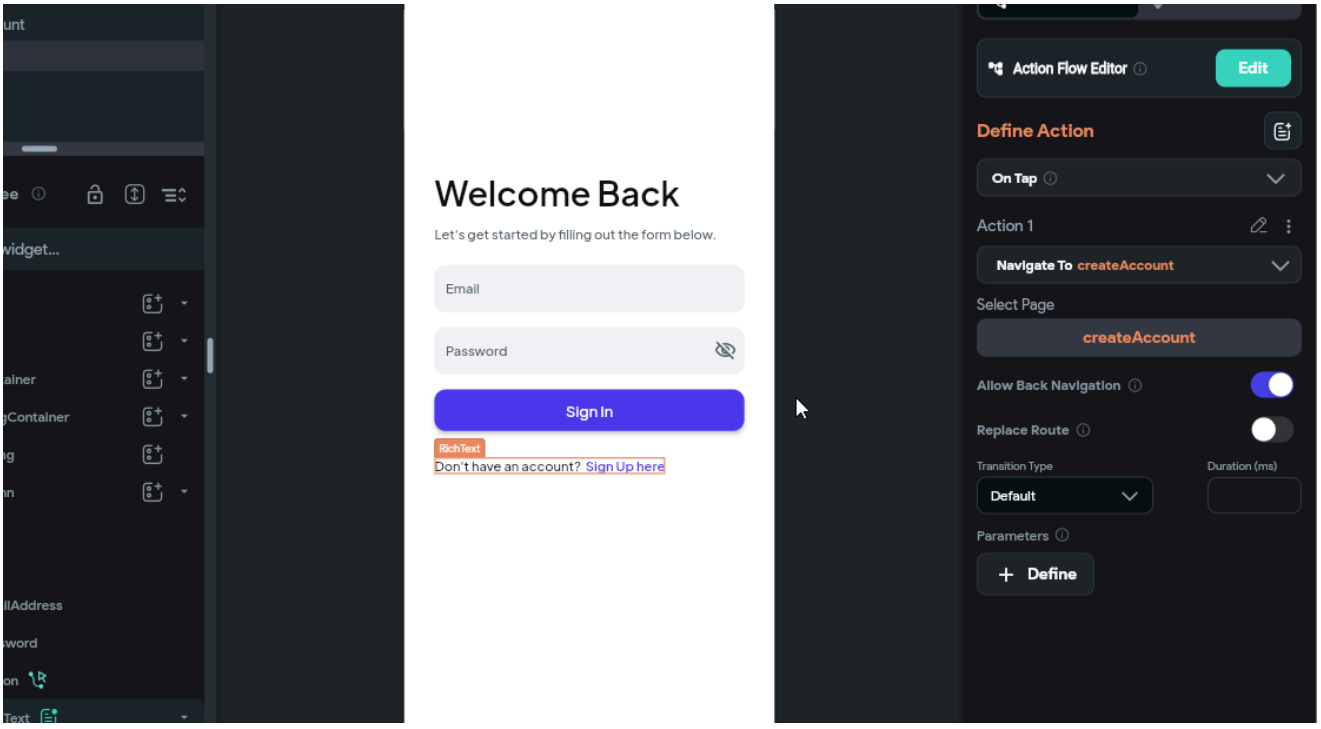

- **Auth provider**: Email
- Connect the **Email TextField**

- Connect the **Password TextField**

This will authenticate the user using email and password.

Navigation Between Login and Create Account Pages

Step 4: Navigate to Create Account Page

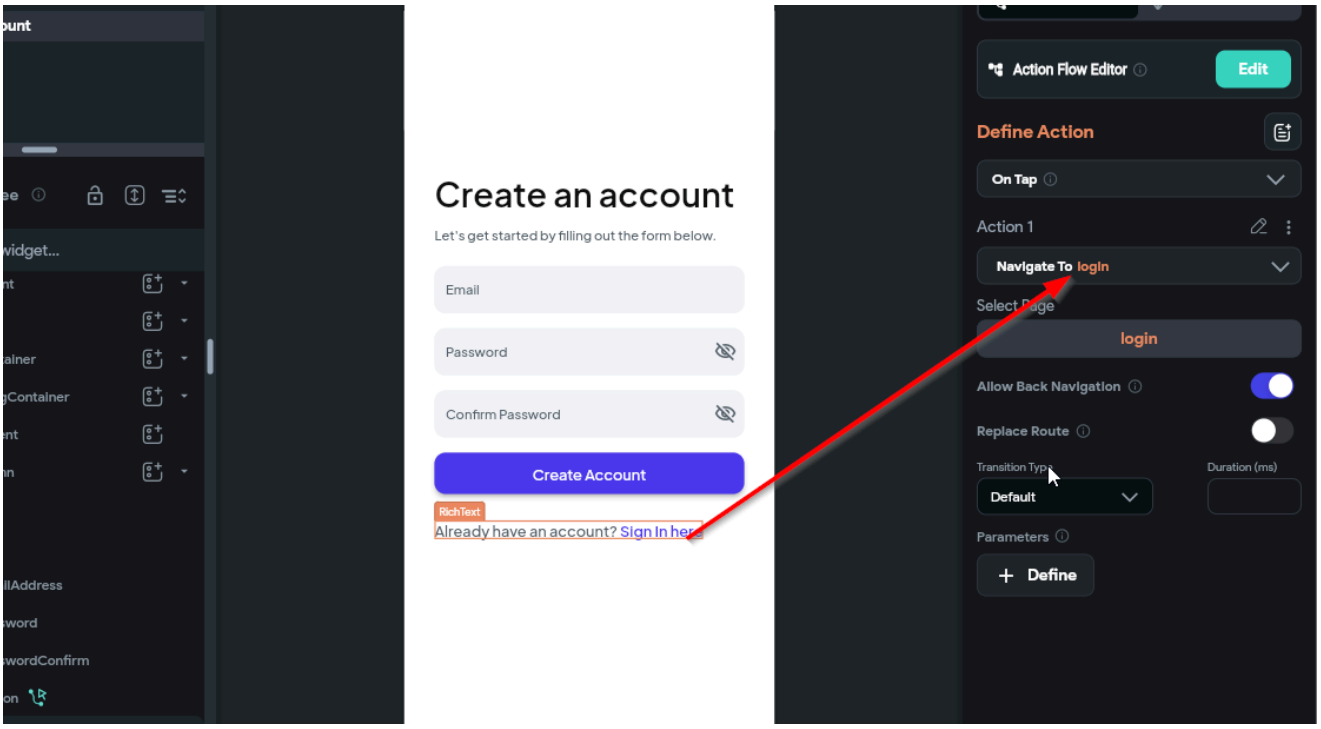

For the text:
“Don’t have an account? Sign up here”

Add an action:

- **Navigate To → Create Account page**

Step 5: Navigate Back to Login Page

On the **Create Account page**, for the text:
“Already have an account? Sign in here”

Add an action:

- **Navigate To → Login page**

Logout Action

Step 6: Configure Logout Button

Go to the **Logout component**.
Select the **Logout button → Actions**.

Set the action as:

- **Supabase Authentication**
- **Logout**

This will log the user out and end the session.
