Rating Bar Widget in FlutterFlow

The **Rating Bar** widget is used to rate products, services, or anything else where a star-based rating is needed.

Step 1: Add Rating Bar

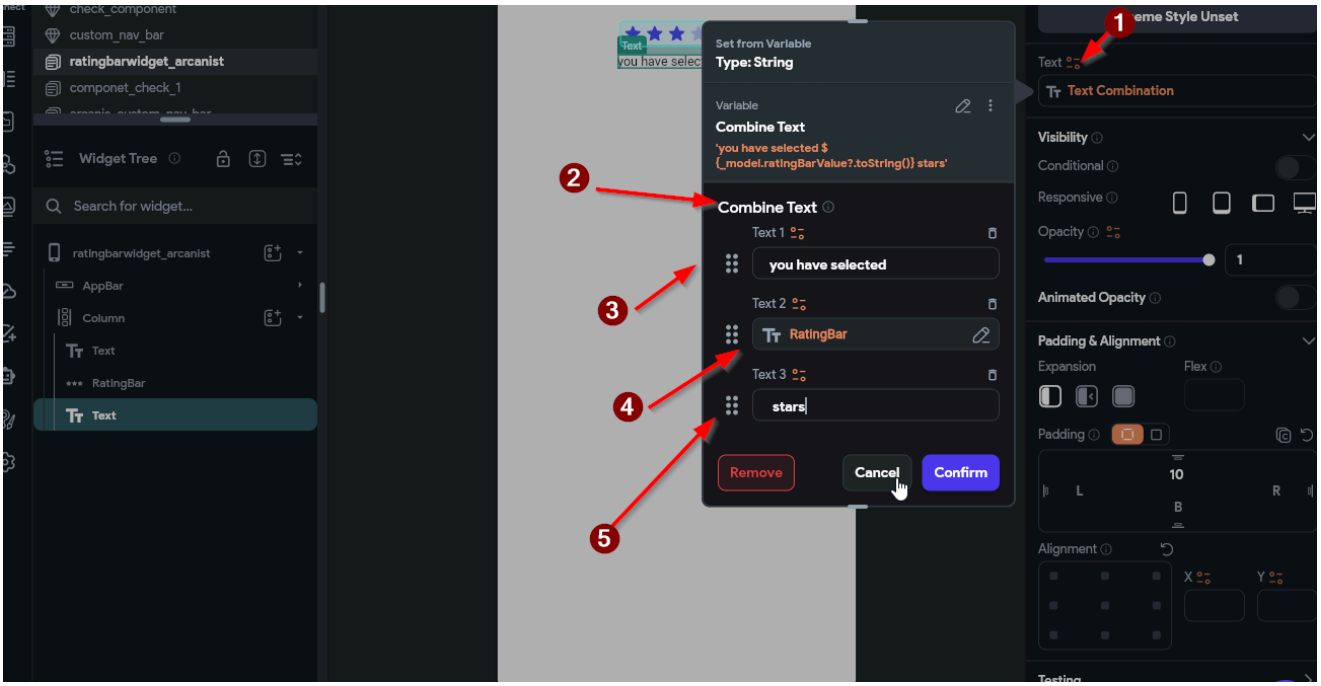

Add a **Rating Bar** widget to the page.

The Rating Bar has many customizable options, such as:

- Rated color
- Unrated color
- Icon
- Icon size
- Icon count
- Initial rating
- Orientation (Horizontal or Vertical)

You can adjust these settings based on your UI requirement.

Step 2: Show Rating Using Widget State

To display the selected rating:

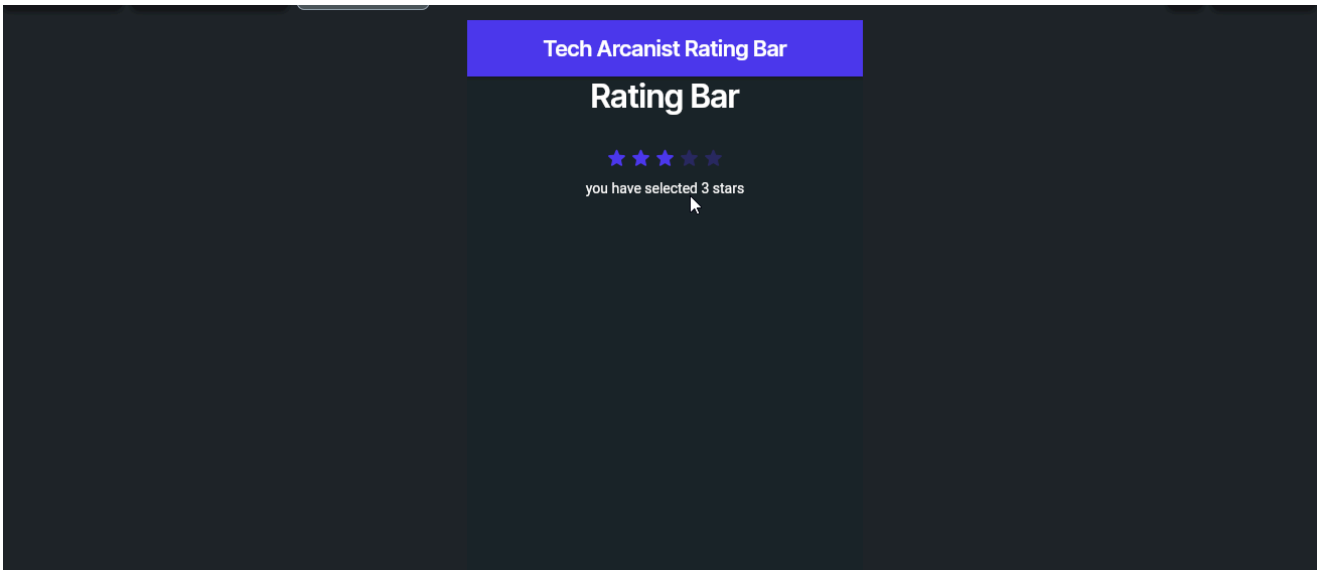

- Add a **Text widget**
- Use **Combine Text**
- Bind the rating value using **Widget State → Rating Bar**

Example text logic:

- Static text:
  You have selected
- Widget state:
  Rating Bar value
- Static text:
  star

So if the user selects **2 stars**, the text will show:
You have selected 2 star

Step 3: Result

The text updates dynamically as the user changes the rating.
