Working with Widget State in FlutterFlow

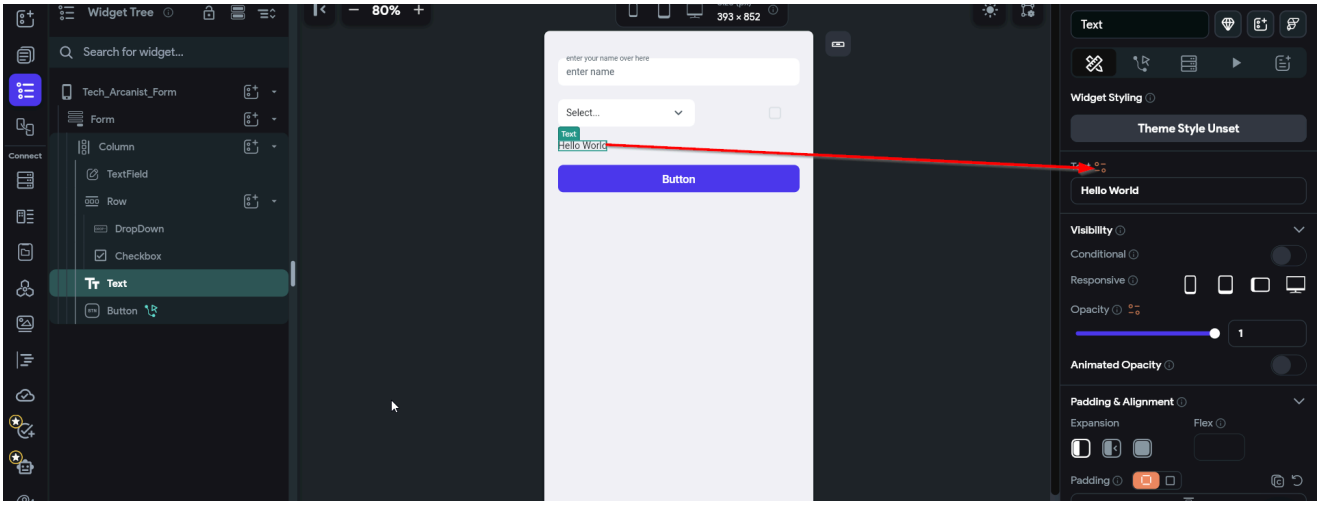

Now we will learn how to use **Widget State** to display dynamic values, using a **Dropdown** as an example.

Step 1: Add Text Below Dropdown

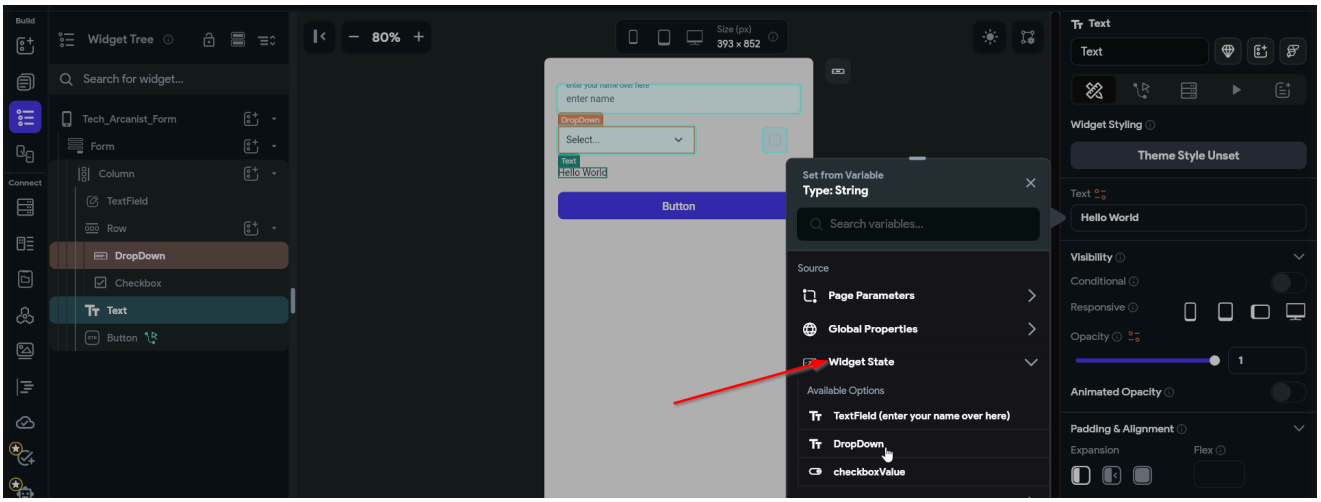

First, add a **Text widget** below a **Dropdown widget**.

Step 2: Open Text Settings

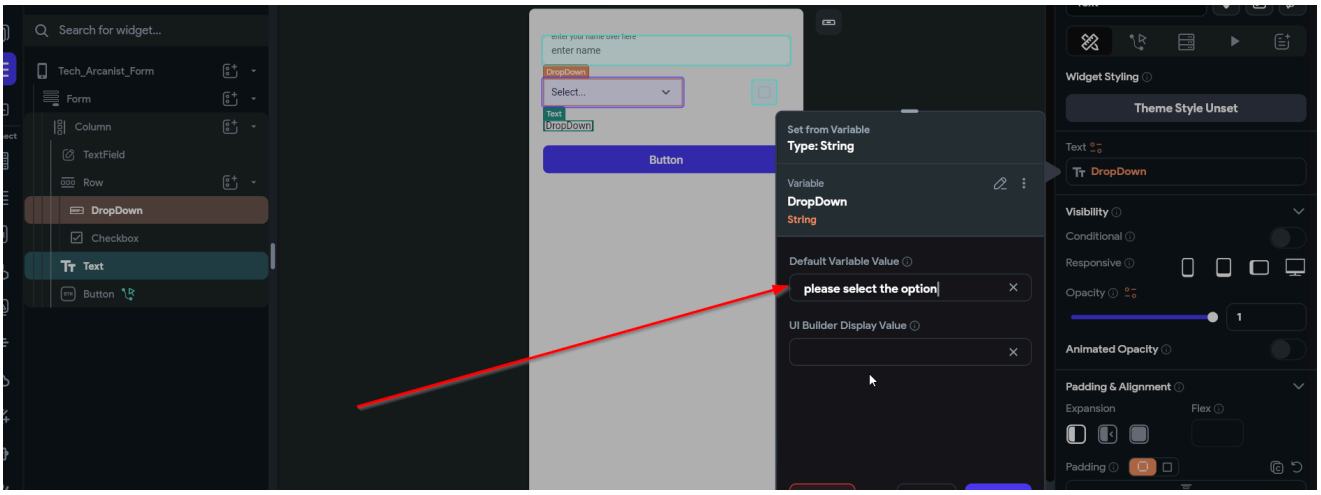

Select the **Text widget** and go to **Settings**.

Step 3: Select Widget State

Click on **Widget State** and select the **Dropdown widget**.

Step 4: Set Default Variable Value

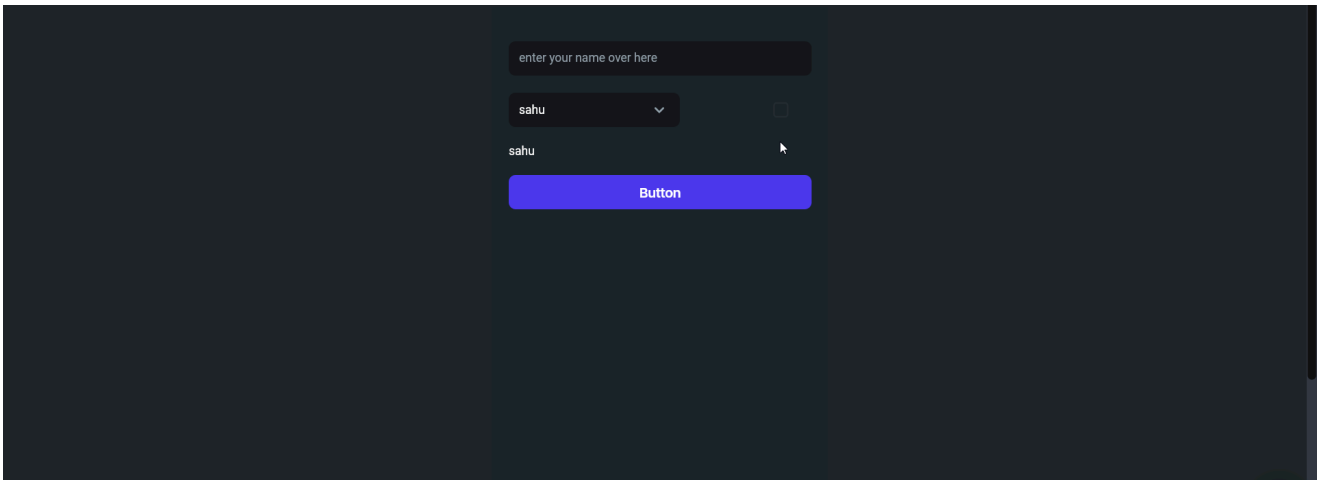

In **Default Variable Value**, enter please select the option

- When no option is selected, this default text will be shown
- When an option is selected from the dropdown, the **same selected value** will automatically appear in the text widget

---

Step 5: Result

As shown above:

- Default text appears initially
- Selected dropdown value is displayed dynamically in the text

---
